† Relates to LED life - actual life may vary depending on individual circumstances. Hours of life corresponds to approximately 6 hours of use per day.

Often used for caravan lighting, display cases and in reading lights, MR11 is slightly smaller than MR16. Thermoplastic material and an insulated power driver protect users from electric shocks. Grooves and ventilation slots enhance the convection and bring superior cooling effect. A high radiation ratio enables the unit to dissipate heat quickly, & consequently brings excellent cooling effects, which directly contributes to a longer and more stable service life.
